

## Milling Roll Refurbishment

We are excited to announce our new milling roll refurbishment service.

Over the last few months, we have invested in a completely new roll workshop at our facility in Penrith, NSW. At the heart of the system is an advanced computer-controlled machining centre custom manufactured for Satake in The Netherlands and capable of both grinding and grooving to the highest level of precision.

A new automated shotblast/frosting station has been installed together with precision tool cutting stations and roll handling equipment.

### Services offered:

- Roll chill inspection report using the latest Optical Flute Testing (OFT) system
- Roll refluting with a compressive range of profile designs
- Roll regrinding and frosting including camber/taper profiles
- Final inspection
- Protective packing and return transport
